PART NUMBER	DESCRIPTION
ARENAVIEW GUI	Camera viewer application.

Description of the product change

ArenaView has enter maintenance status as of release v1.0.85.12 of Arena SDK.

Going forward, **ArenaView MP** will be the primary camera viewer GUI included with Arena SDK, replacing ArenaView.

The decision to transition **ArenaView** to maintenance status aligns with LUCID's roadmap to implement **GigE Vision 3.0** support in Arena SDK. Focusing development and validation efforts on **ArenaView MP** allows us to maximize test coverage, reduce maintenance complexity, and deliver a smoother transition from GigE Vision 2.0 to 3.0.

Maintenance Status

Starting with the next major release of the **Arena SDK**, ArenaView will no longer be included as part of the standard Arena SDK package. ArenaView will remain in maintenance status, with patch releases made available to customers upon request as needed.

Recommended action for customers

Please transition to **ArenaView MP** as your primary camera viewer in place of **ArenaView**. If you are unable to migrate to ArenaView MP and require a patch release, please contact LUCID Support.
